

# SPA<sub>100</sub>

## A REVOLUTION IN WATER DISINFECTION

Owning a spa or hot tub provides you with the ultimate relaxation tool. The hot water relieves you of stress, the massaging jets take care of stiff muscles and tiredness. If only taking care of the water was just as relaxing...

For years, spa owners have used chlorine to sanitise spa water. And although chlorine tablets are highly effective, their use is smelly, unpleasant and often

causes skin irritations. Thanks to Swedish company CleanWaterTech - there is at last a perfect alternative:

SPA100

Two liquids

SPA100 is a new way to disinfect water in spas. The product consists of two liquids that are mixed in a special container just before use.

*continued over .....*

# CHLORINE FREE, SKIN FRIENDLY AND EASY TO USE... IN ANY SPA

Adding the mixture to the spa water turns it yellow. As soon as the colour disappears, the water is sanitised and the spa is ready to be used. SPA100 is effective without using chlorine, marking an important step forward in water treatment. Not only does it take care of organic contamination, it also breaks down the biofilm that acts as a breeding ground for micro-organisms - the spa's filter system removes the residue.

## Drinking water

SPA100 - developed and manufactured by the Swedish CleanWaterTech company, building upon its many years of experience with sanitising drinking water. After SPA100 has disinfected the water, the product itself evaporates, leaving the spa water free from odours, taste and chemical residue.

This also guarantees that the water may be safely discharged into any sewer system. SPA100 is skin friendly (no residual chlorine) and very easy to use. Supplied in a convenient "carry box" containing two 1 litre bottles and a mixing container. Enough to disinfect an average spa 12 times (3 to 4 months)

- very easy to use: just mix the two liquids and add to the spa water
- yellow colour signals disinfection is in progress
- when the colour has gone,  
your spa water is 100% safe
- no smell, no taste, no irritation
- environment-friendly; no contamination
- perfect for people with sensitive skin (and children!)
- SPA100 – 100% effective!
